PROTECTIVE, PERFORMANCE AND POWDER COATINGS

Features and recommended use

- Designed as a high performance maintenance coating for coastal and industrial polluted environments
- Self priming; eliminates the usage of primer.
- Suitable as a touch up coat in projects for weld seams and damaged epoxy coating
- Can be applied on marginally prepared surfaces; tolerant to lower grades of steel preparation.
- Excellent corrosion resistance
- Can be over coated with conventional coatings and most two component paints
- Good adhesion to aged and sound epoxy, polyurethane and conventional alkyds
- Good chemical resistance

PRODUCT DESCRIPTION

Two component, high build, self priming, rust encapsulating, modified epoxy coating

FEATURES AND RECOMMENDED USE

- Designed as a high performance maintenance coating for coastal and industrial polluted environments
- Self priming; eliminates the usage of primer.
- Suitable as a touch up coat in projects for weld seams and damaged epoxy coating
- Can be applied on marginally prepared surfaces; tolerant to lower grades of steel preparation.
- Excellent corrosion resistance
- Can be over coated with conventional coatings and most two component paints
- Good adhesion to aged and sound epoxy, polyurethane and conventional alkyds
- Good chemical resistance

PRODUCT DATA SHEET

RUST O CAP
Surface tolerant epoxy

PRODUCT DATA SHEET

Two component, high build, self priming, rust encapsulating, modified epoxy coating

FEATURES AND RECOMMENDED USE

- Designed as a high performance maintenance coating for coastal and industrial polluted environments
- Self priming; eliminates the usage of primer.
- Suitable as a touch up coat in projects for weld seams and damaged epoxy coating
- Can be applied on marginally prepared surfaces; tolerant to lower grades of steel preparation.
- Excellent corrosion resistance
- Can be over coated with conventional coatings and most two component paints
- Good adhesion to aged and sound epoxy, polyurethane and conventional alkyds
- Good chemical resistance

The data given is for guideline only. The physical values are subject to normal manufacturing tolerances, colour and testing variances

- The volume solids indicated are as per ASTM D 2697 air drying method.
- The actual drying time/ overcoat interval may be shorter or longer, depending on film thickness, ventilation, humidity, temperature etc.
- The information provided above is at 30°C and 65% relative humidity.

DIRECTION FOR USE

Surface Preparation

- Surfaces must be dry, clean and free from contaminants
- Ensure removal of dirt, dust, oil and all other contaminants that could interfere with adhesion of the coating. Oil and grease should be removed as per SSPC-SP1 solvent cleaning.
- Surface should be checked and treated in accordance with ISO 8504 prior to priming
Blast Cleaning

- Steel, abrasive blast clean to min. Sa 2 1/2 (ISO 8501-1: 200) or SSPC –SP6. Incase oxidation has occurred between blasting and application of Rust O Cap, the surface should be reblasted.
- A blasting profile of (Rz) 50-60 microns is recommended.

For atmospheric exposure condition

- New hot-rolled steel; blast cleaned to min Sa 2 of Swedish specification.
- Weathered steel; power tool cleaned to St 3 or hand tool cleaned to St 2.
- Existing sound epoxy coating system and sound alkyd coatings; sufficiently roughened, dried, and cleaned.
- High pressure fresh water washing or scrubbing to remove loose paint and contamination. Intact areas to be roughened.
- Damaged and rusty areas to be derusted to minimum St3/St2 by power tool / hand tool cleaning.

Application Conditions

- Substrate temperature should be at least 3°C above dew point but not above 50°C.
- Relative humidity should be below 85%
- Good ventilation is required in confined areas to ensure proper curing.

Mixing

- Rust O Cap is supplied in two packs. Stir the base and hardener separately. If settling is observed in the base or hardener, loosen the settled material with the help of hand stirrer followed by power driven stirrer (at lower RPM) for quick homogenous mixing.
- Mix hardener gradually into the base under continuous stirring as per the mixing ratio. Once the unit has been mixed, it should be consumed within the working pot life. In case of part mixing (which should be avoided), close the lids of containers tightly to avoid contact with atmospheric moisture.
- Thinner should be added after mixing the components and post the induction time. Addition of excessive thinner will lead to reduced sag resistance.

Note: Air spray is generally not recommended. For touch up of small and inaccessible area air spray can be done.
Special Instruction

- Surface discoloration may occur upon exposure to sunlight, elevated temperatures or chemicals. However, this does not impact anti-corrosive performance.
- Not recommended for immersion services in acids, alkalies & solvents
- A test patch is recommended over non-ferrous metals and adhesion to be checked as per ASTM D 3359 to confirm suitability.

Product Characteristics

- Maximum film build in one coat is best attained by airless spray. By brush application typical 75 microns is achieved in one coat and multiple coats will be required to achieve the total specified thickness.
- The maximum performance is achieved after complete curing.
- A minimum of two coats application is recommended over prepared
- As common to all epoxy, the product will chalks and discolor on exterior exposure. However these phenomenon are not detrimental to anti-corrosive performance

</table>

Cleaning

- Do not allow the product to remain in hoses, gun or spray equipment. Clean all equipments immediately after use with Thinner T 141. It is recommended to periodically flush out spray equipment during the course of the working day. The frequency of cleaning will depend on amount sprayed, temperature and time gap.
- All surplus material and empty containers should be disposed of in accordance with appropriate regional legislation.

SAFETY INFORMATION

- As a general safety measure, inhalation of solvent vapours or paint mist and contact of liquid paint with skin & eyes, should be avoided. Forced ventilation should be provided when applying paint in confined spaces or stagnant air. Even when ventilation is provided, respiratory, skin and eye protection are always recommended when spraying paint.
- Please refer our Material Safety Data Sheet prior to using the product.
